SUMMARY

Java Backend Developer specializing in Spring Boot, Microservices, and REST API design, with hands-on experience building event-driven backend systems using Apache Kafka, Redis, and MySQL. Strong foundation in distributed systems, application security, and software engineering fundamentals, with a growing interest in cloud technologies and DevOps practices.

TECHNICAL PROJECTS

Digital E-Wallet Platform (Microservices Architecture) | *GitHub* Dec 2025 – Present

Java / Spring Boot 3 / Apache Kafka / Redis / MySQL / Spring Security / Hibernate ORM, JPA

- Designed and built a distributed E-Wallet backend using a microservices architecture, enabling modular services for user onboarding, wallet management, and real-time transaction processing.
- Implemented inter-service communication using Spring Cloud OpenFeign for synchronous RESTful calls and Apache Kafka for asynchronous event-driven messaging, decoupling services and making each independently modifiable.
- Implemented Spring Security with JWT-based authentication and authorization, including token generation and validation, to secure REST APIs while maintaining clear service boundaries across microservices.

Event-Driven Movie Booking Platform | *GitHub* Aug 2025 – Nov 2025

Java / Spring Boot / Spring Security / Apache Kafka / MySQL / Hibernate ORM, JPA

- Developed a Spring Boot backend for movie listings, show scheduling, and ticket booking, exposing REST APIs with relational data modeling via Spring Data JPA and MySQL.
- Implemented an event-driven notification pipeline using Apache Kafka to publish booking events and trigger email confirmations via JavaMail, ensuring the booking API is not blocked by email delivery.
- Designed a layered architecture (Controller-Service-Repository), entity relationship modeling, and role-based authentication and authorization via Spring Security to promote separation of concerns and enforce access control.

Library Resource Management System | *GitHub* Feb 2025 – Jun 2025

Java / Spring Boot / Spring MVC / Spring JDBC / MySQL

- Built a RESTful backend system to manage library operations, including book inventory, student records, and borrowing transactions using a clean, layered architecture with clear separation of concerns.
- Integrated MySQL using Spring JDBC (JdbcTemplate) for manual SQL query handling and custom object mapping, gaining hands-on experience with low-level database interaction without ORM abstraction.
- Implemented core business logic for book issuance and returns, ensuring transactional integrity and data consistency across library workflows.

TECHNICAL SKILLS

Languages: Java (8,11,17) , React

Backend Frameworks: Spring Framework, Spring Boot 3, Spring Core, Spring MVC, Spring Security, Spring Cloud (Eureka, OpenFeign)

Microservices & Architecture: Microservices Architecture, REST APIs, Event-Driven Architecture, Object-Oriented Programming (OOP)

Databases & Caching: MySQL, SQL, Spring Data JPA, Hibernate ORM, JPA, Spring JDBC (JdbcTemplate), Redis

Messaging: Apache Kafka (Producer/Consumer, Topic Management, Async Workflows)

Security: Spring Security, JWT, OAuth2, OpenID Connect, Authentication & Authorization

Testing: JUnit 5, Mockito (Unit Testing, Integration Testing)

Tools & DevOps: Git, GitHub, Maven, Docker, Postman, IntelliJ IDEA

EDUCATION

Amity University

Bachelor of Computer Applications (BCA); CGPA: 7.2

Noida, Uttar Pradesh

July 2021 – November 2024

Bal Bharati Public School

Senior Secondary Certificate (Class XII); Percentage: 76%

Noida, Uttar Pradesh

April 2016 – April 2017

CERTIFICATIONS

Data Structures & Algorithms in Java | *Apna College*

Feb 2025

Java Backend Development Program | *GeeksforGeeks*

Nov 2025
